## Large Capacity Dust Handling Vacuum Units

The central vacuum cleaner Optimum is a mid-range machine with a large capacity. This model is available with a 3 or 4 kW vacuum pump, which can be set for direct start or equipped with a frequency converter to improve its thermal efficiency and overall effectiveness.

The pump is designed and made in Europe, with a robust construction to ensure its long and problem-free life. The standard pump has a separate vacuum relief valve and a thermal protection. The mounted muffler keeps the noise levels as low as possible.

Optimum is built on a strong and stable frame, resting on four adjustable feet to insure its secure installation. These same holes can be used to anchor the unit to the ground.

The centrifugal separator has a steel hinged dust container which can easily be opened and closed by a lever. The collected garbage is gathered inside a plastic bag within the dust container for an easy and hygienic manipulation.

The polyester filter complies with the BIA requirements for the class "M". Its surface is 4 m<sup>2</sup> and its conical shape increase the efficiency of its filter cleaning function. The standard vacuum unit is delivered with a semi-automatic filter cleaning function, but can be upgraded to a fully automatic compressed air cleaning function.
